

Evaluate How `song_count` changes with trial at 40C

Michael Gilchrist

date: 2022-10-20

Goal

- Evaluate trends in `song_count` under a (near) constant temperature.

Set up

Mean vs. Var: Filter High Var = TRUE, Low Mean = TRUE

temp_target = 40C

Results

- Excluding males with very high variances indicates that for the remaining males $\text{var} \sim \text{mean}$, but overdispersed relative to the poisson.

Compare song_count vs trial at 40C
